

Soluxtec - First Photovoltaic Manufacturer in the World to get RAL SOLAR Certified !!

Soluxtec is the **first photovoltaic manufacturer to be RAL SOLAR certified in EU and worldwide**. It is a key milestone in our continuous journey to achieve excellence and raise industry standards. The RAL Gütezeichen (Quality Marks) demonstrates that a product or service fulfils all of the important requirements of these extremely high quality characteristics. Therefore, consumers can be further assured of the high standards for the solar panels manufactured by us. This is in line with our long-term vision to provide the most compelling value to our customers through sustainable and innovative solutions meeting high universal quality standards approved by recognized organizations like RAL which is an umbrella organisation for all Quality Assurance Associations.

What distinguishes RAL Gütezeichen (Quality Marks) from other labels?

RAL Gütezeichen (Quality Marks) stand for unambiguous labelling. They provide transparency and security through objective and verifiable quality criteria - the adherence to which is constantly monitored.

RAL Gütezeichen (Quality Marks) deliver what they promise. Because that's what the RAL Gütezeichen (Quality Marks) system (Gütezeichensystem) stands for.

This is a very important milestone for us and a key achievement as RAL certification stands for a visible, independent and objective validation of the particular quality of a product or service. That means that they stand for particularly high quality and due to their independence they are particularly trustworthy. We are proud to be the first ones to attain this worldwide and it speaks for Soluxtec as an innovative Module Producer fulfilling not only the required standards but going an extra mile in strengthening the Made in Germany quality promise

- Tim Leutert, Managing Director Soluxtec

RAL German Institute for Quality Assurance is an independent institution of voluntary self-regulation that has been valued worldwide for almost 100 years. Over 9,000 German and foreign companies use a RAL quality mark from all economic sectors in the German, European and global markets. They stand for reliable compliance with quality standards through constant in-house and neutral external monitoring, to which manufacturers and providers voluntarily submit. As the managing director of the Gütegemeinschaft Solaranlagen I am particularly proud to be able to certify a company based in Germany that is known for its unparalleled and top notch quality.

- Joachim Westerhoff, Managing Director RAL
